ADBMS Unit 2 MCQ Bank

ADBMS Unit 2 MCQ Bank

Parallel and Distributed Databases • Based on syllabus and PPT points

Coverage	Database architectures, parallel systems, I/O parallelism, inter/intra query parallelism, distributed storage, transactions, 2PC, concurrency control, skew, replication, HDFS, and indexing
Format	Part A: One correct option • Part B: Two correct options
Use	Quick revision for your Unit 2 test

Part A: MCQs with One Correct Option

- A distributed database system consists of
 - tightly coupled sites sharing memory
 - loosely coupled sites sharing no physical component
 - one site with many users
 - one DBMS with many schemes

Answer: B
- In a homogeneous distributed database, all sites
 - use different software
 - use identical software
 - are not aware of each other
 - cannot cooperate

Answer: B
- A major problem in heterogeneous distributed databases for query processing is
 - disk failure
 - schema differences
 - no transactions
 - no users

Answer: B
- A distributed database appears to the user as
 - many unrelated systems
 - a single system
 - an offline system
 - a file server only

Answer: B

Parallel and Distributed Databases • Based on syllabus and PPT points

Coverage	Database architectures, parallel systems, I/O parallelism, inter/intra query parallelism, distributed storage, transactions, 2PC, concurrency control, skew, replication, HDFS, and indexing
Format	Part A: One correct option • Part B: Two correct options
Use	Quick revision for your Unit 2 test

Part A: MCQs with One Correct Option

- A distributed database system consists of**
 - A. tightly coupled sites sharing memory
 - B. loosely coupled sites sharing no physical component
 - C. one site with many users
 - D. one DBMS with many schemas

Answer: B
- In a homogeneous distributed database, all sites**
 - A. use different software
 - B. use identical software
 - C. are not aware of each other
 - D. cannot cooperate

Answer: B
- A major problem in heterogeneous distributed databases for query processing is**
 - A. disk failure
 - B. schema differences
 - C. no transactions
 - D. no users

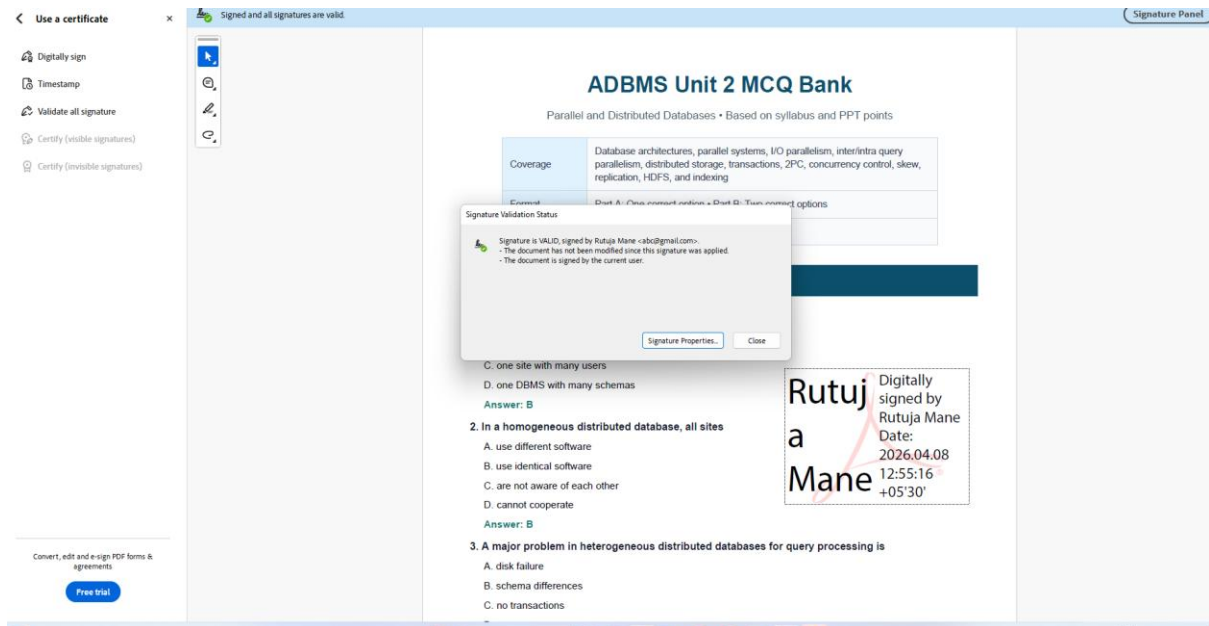

Answer: B
- A distributed database appears to the user as**
 - A. many unrelated systems
 - B. a single system
 - C. an offline system
 - D. a file server only

Answer: B
